Far Eastern Hardwoods

Dark Red Meranti

Meranti is a competitively priced red hardwood sourced from Malaysia. It is also readily available in both random specifications and in dimension stock.

We offer supply for forward shipments direct from our suppliers.

Most of our supply is now MTCC and soon MTCS certified (the Malaysian certification standard) which we can pass on using our chain of custody.

Yellow Balau

Sourced mainly from Sabah in Malaysia and also in limited volumes from West Malaysia this is a very durable specie, mainly used for external applications and often for decking. It is only exported in its machined form from Indonesia where the specie is known as Bangkirai.

We carry stock in machined decking profiles of which you can see details on our *Semi-finished products* page.

Malaysia and Indonesia have a very wide number of species available of which only a few are used commercially.

Ask us about Keruing, Kapur, Durian or Nyatoh, or for many of the other possible species available to you.

Many of the lesser used species less popular for use in the rough sawn form due to their characteristics, are very suitable for use in finger jointed or laminated form. Our *Semi-finished products* page will give you more information.

Dark Red Seraya Majau

More consistent in colour and density than Meranti, this specie tends to command a corresponding price premium.

We stock Select and Better grade, 2", 2.1/2" and 3" in widths 9" and wider.

Other sizes are available for forward shipment.
