

North American Hardwoods

We are exclusive agents in the UK and Ireland for Gilco Lumber

On this page **White Oak, Ash** and **Black Walnut**

On the next page, **Tulipwood, Cherry, Red Oak, Hard Maple** and **Hickory**

White Oak

We carry 1" to 3" random width and lengths in Prime (FAS/FAS1F) grade.

1" and 2" are also carried as FSC certified.

By holding stock from different origins, southern appalachian to northern productions we can offer a range of price, specification and characteristics according to our customers' requirements.

In our thick stock we have selected our suppliers very carefully, choosing only those with a proven track record in drying thick stock.

In addition, we also carry a range of width selected specifications. Strips, pulled or ripped to width in 1" thick and from 5" to 9" wide and wider, 8" and wider in 1" and when available 1.1/2" or 2".

Ash

We carry 1" to 3" random width and lengths in Prime (FAS/FAS1F) grade and an 8" and wider selection as available in 1" to 2" thick.

Black Walnut

Walnut is graded differently from the other American Hardwoods and the same FAS/FAS1F grade allows more defects.

It is always steamed to minimise the contrast between it's light sapwood and the dark heartwood.

As the logs are generally quite small, lengths are often shorter on average than in most other species. We carry 1" to 3" in random widths and as available in wider selections.

Cherry

This specie is bought for its colour and price is largely determined by colour specification, especially in the 1". We buy our cherry from the best areas to maximise the red heartwood and minimise other characteristics like gum.

In stock we have 1" with a 90/50 selection (90% red 1 face and 50% red on reverse) or a 95/70 selection. Similarly in 1.1/2" we have the 95/70 selection. For stock 2" or thicker we carry a product that is unselected for colour as it is cut further from the more sappy outside of the log. Our thickest stocked item is 3". We will carry some wide board selections as available.

Hickory

A useful alternative specie for flooring or furniture, we have a small volume of 1" random specification in stock.

Tulipwood

Tulipwood is the utility American hardwood specie that offers good value and adaptable properties for a wide range of uses.

We hold 1" to 2" in random specifications and wide selections in 1" and 2". We will also stock FSC certified whenever we find it available.

Hard Maple

We have No1 white Maple in stock with random specifications from 1" to 3" and FSC certified in 1", 1.1/2" and 2".

We also have a surfaced 1" product meaning that consistent colour selection is possible for any end user.

We can of course source on your behalf many other grades and specifications according to your requirements.
